TECHNICAL
GENERAL CHAMPIONSHIP
2026

HIGH PREP

INTRODUCTION

Conferences and multi-day events and large-scale events are complex, multi-stakeholder systems involving sponsors, speakers, exhibitors, venues, pricing strategies, and community-driven growth. Today, organizing a conference requires manual coordination across fragmented tools (LinkedIn, email, spreadsheets, CRM tools, event platforms), making the process inefficient, time-consuming, and nonscalable.

With the rise of AI agents and autonomous workflows, there is an opportunity to build an end-to-end intelligent conference organizer system that automates decision-making, discovery, and execution throughout the event lifecycle.

PROBLEM STATEMENT

Design and build an AI-powered multi-agent system for conference organization, where each agent specializes in a specific function of the event lifecycle.

Given:

- A conference/event category (e.g., AI, Web3, ClimateTech, Music Festival, Sports)
- A geography (Europe, India, USA, Singapore)
- A target audience size

The system should autonomously assist an organizer in planning and executing a conference.

Core Challenges:

- Data Fragmentation: Relevant data (sponsors, speakers, venues, communities) is scattered across platforms like LinkedIn, event websites, and Discord.
- Lack of Historical Intelligence: Organizers do not leverage past conference data effectively.
- Manual Outreach & Planning: Sponsor/speaker discovery is repetitive and inefficient.
- Pricing & Demand Uncertainty: No clear model to estimate ticket pricing vs attendance.
- Go-to-Market Complexity: Identifying the right communities for promotion is difficult.

Expected Solution: Multi-Agent Architecture

Pick a primary domain:

- Conferences
- Music Festival
- Sporting Events

Extra points if:

- Solution extends to multiple domains.
- Build a domain-agnostic agent architecture

Participants must build a system consisting of the following agents:

1. Sponsor Agent

- To recommend potential sponsors for the event
- Potential sponsors can be identified from conferences/events held in the last 12 months across geography and categories, or by their recent marketing spend
- Extract sponsor data
- Recommend relevant sponsors for a new conference/event

- Prioritize sponsors based on:
  - Industry relevance
  - geography
  - historical sponsorship frequency
- Create a customised sponsorship proposal

2. Speaker/Artist Agent

- Discover speakers/artists/subject matter experts via LinkedIn / web sources
- Suggest speakers/artists based on:
  - event topic
  - past speaking/performance experience
  - influence (followers, publications, etc.)
- Recommend agenda topics + speaker mapping

3. Exhibitor Agent

- Identify companies that exhibited at similar conferences/events
- Suggest potential exhibitors
- Cluster exhibitors by category (startup, enterprise, tools, individual, etc.)

4. Venue Agent

- Recommend venues based on:
  - City
  - expected footfall
  - budget constraints
- Include capacity, pricing, and past event usage
- Locations can be taken from , , and other sources

5. Pricing & Footfall Agent

- Predict:
  - optimal ticket pricing
  - expected attendance

Model relationship between:
- pricing tiers (early bird, VIP, etc.)
- conversion rates
- Use historical event data

6. Community & GTM Agent

- Identify relevant communities (focus on Discord initially, other: Slack/ LinkedIn/Facebook groups) eventlocations.com Cvent.com
- Categorize communities by niche
- Suggest:
  - Where to promote
  - Messaging (GTM strategy)
- Output a distribution plan

(Important Addition — This will impress judges)

7. Event Ops / Execution Agent (Optional but HIGHLY RECOMMENDED)

- Agenda → schedule builder
- Conflict detection (overlapping sessions)
- Resource planning (rooms, speakers, timing)

8. Optional

- Revenue projection
- Ticket tier simulation
- Break-even analysis

Key Features

To address the problem effectively, the solution should include:

1. Multi-Agent Orchestration System
2. Agents communicate and share context
3. Data Aggregation Layer
4. Scraping / APIs / structured datasets
5. Recommendation Engine
6. Context-aware suggestions (not generic)
7. Search + Ranking Algorithms
8. Relevance scoring for sponsors/speakers
9. Predictive Modeling
10. Pricing vs attendance forecasting
11. User Interface
    Input: conference details
    Output: structured planBonus

Participants may include:

1. AI agents with memory (RAG/vector DB)
2. Autonomous outreach drafts (email/LinkedIn)
3. Real-time web scraping pipelines
4. Simulation dashboard (what-if scenarios)
5. Multi-agent collaboration visualization

Final Deliverables

Participants are expected to submit:

1. A GitHub repository containing the complete source code
2. A hosted platform / working prototype
3. A demo video showcasing the system functionality
4. An engineering document explaining the architecture and approach
5. Sources of data used

JOIN THE DISCORD – https://discord.com/invite/tA4hwM3Dj

EVENT LINK - https://link.addpinch.com/dl?eventId=cb25640a-7129-40d7-a171-d265d3cbadcf

Mandatory Data Deliverable

A structured dataset of conferences/music festivals/sporting events from 2025 and 2026 events), including:
Event name
Location (Europe, India, US, Singapore)
Category/theme
Sponsors
Speakers
Exhibitors
Ticket pricing (if available)
Estimated attendance (if available) (+ futureData should be:
Cleaned and normalized
Provided in CSV / JSON format
Accompanied by a brief explanation of:
data sources
extraction method (scraping, APIs, manual, etc.)

Evaluation Criteria

Submissions will be evaluated based on:

1. Solution utility & real-worldapplicability – 25%
2. Production readiness & ease of integration – 25%
3. Technical implementation (AI,system design) – 20%
4. Novelty of use case - 10%
5. Data quality & coverage – 10%
6. Engineering Documentation Report – 5%
7. Presentation quality - 5%

Team Composition

Minimum: 4 members, Maximum: 6 members
I compulsory spot for the Product Owner who will write the product requirements, help with project management, and help make the final presentation.

Prize
INR 50k cash prize to the winning team
Internship and Job Opportunities for Product Management and Tech Roles
